Trigonometry (from Greek trigōnon, "triangle" and metron, "measure") is a branch of mathematics that studies relationships between side lengths and angles of triangles. The field emerged in the Hellenistic world during the 3rd century BC from applications of geometry to astronomical studies. The Greeks focused on the calculation of chords, while mathematicians in India created the earliest ...

28. Solve  $5x^2 = 180$  algebraically.. Answer:  $5x^2 = 180$   $x^2 = 36$   $x = \sqrt{36}$   $x = +6$  If you forget the  $-6$ , you lost a point. If you divided incorrectly and didn't get a perfect square, you could have salvaged a point if you left your answer in radical form with a  $+$  symbol in front of it. However, if you estimated the radical, you probably lost the other point as well.
