Knowledge Management Systems

Change to any one of these will inevitably lead to changes to the others, as organisations are complex inter-related systems. The checklist below aims to provide some generic guidance for those implementing change in their organisations.

Change Management - CMI

Knowledge is a key building block of change management. If you want to drive a change, you need to help build the knowledge that individuals need to make the change. Individuals need two types of knowledge: 1) how to change during the transition, and 2) how to perform effectively in the future state. Keep in mind that knowledge is only effective if there is already awareness and desire to make the change.

Knowledge On How To Change - Sources of Insight

UNESCO's Local and Indigenous Knowledge Systems programme (LINKS) promotes local and indigenous knowledge and its inclusion in global climate science and policy processes. Working at local, national and global levels, LINKS strives to strengthen indigenous peoples and local communities, foster transdisciplinary engagements with scientists and policy-makers and pilot novel methodologies to further understandings of climate change impacts, adaptation and mitigation.

Indigenous Knowledge and Climate Change

Meaningful dialogue holds the key. Resilience in the face of change is embedded in indigenous knowledge and know-how, diversified resources and livelihoods, social institutions and networks, and cultural values and attitudes. Policy responses to climate change should therefore support and enhance indigenous resilience.
